PROJECT BRIEF · CONFIDENTIAL

Alpha Tantalum & Tin

PR16516 & PR16517 | Democratic Republic of the Congo

A tantalum and tin project with strong surface indicators, artisanal activity and potential for associated critical minerals.

TANTALUM | TIN | CRITICAL MINERALS | ARTISANAL ACTIVITY | GROWTH POTENTIAL

Confidential. For invited partners only. Information is indicative and subject to technical review and agreement. Facts and figures are draft and require competent technical review.

TANTALUM & TIN	PR16516 & PR16517	ARTISANAL ACTIVITY	CRITICAL MINERALS	DEVELOPMENT PATHWAY
High-grade surface samples	Democratic Republic of the Congo	Historical and current small-scale mining	Potential for REE association	Exploration, pilot plant and scale-up potential

PROJECT OVERVIEW

Alpha Tantalum comprises two exploration licences (PR16516 and PR16517) in the Democratic Republic of the Congo, prospective for tantalum (tantalite) and tin (cassiterite), with encouraging surface samples and artisanal activity.

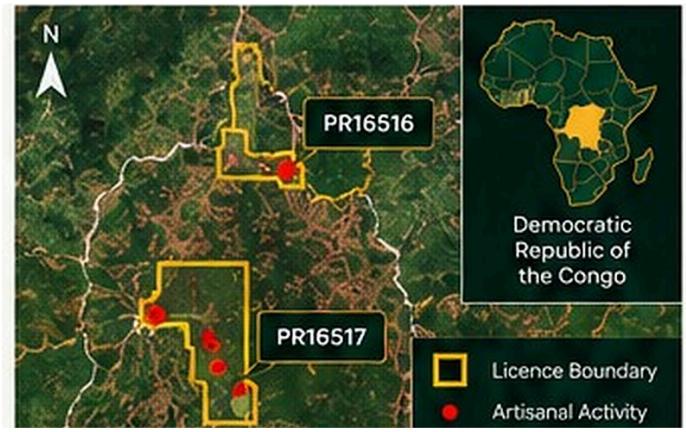

The project also has potential for associated critical minerals, including rare earth elements.

Guilgal International, through Alpha Tantalum SARL, is advancing technical studies, exploration and development options in partnership with local stakeholders.

KEY HIGHLIGHTS

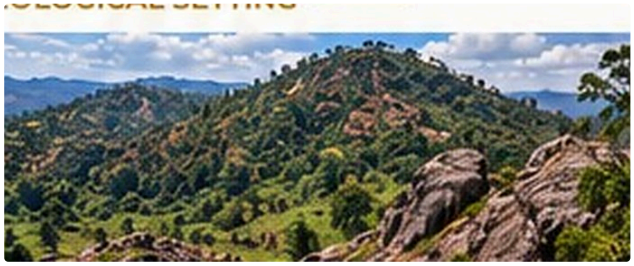

- Two exploration licences (PR16516 & PR16517)
- Tantalum and tin mineralisation with strong surface samples
- Artisanal mining activity
- Potential for associated critical minerals (REE, Rb)
- Pathway from exploration to pilot processing and scale-up
- Support from local partners and financial institutions

PROJECT LOCATION

Illustrative location map

GEOLOGICAL SETTING

- Located within a prospective tin-tantalum belt.
- Pegmatites and associated granitic intrusions.
- Evidence of tantalum, tin and associated critical minerals.
- Accessible by existing regional infrastructure.

ARTISANAL ACTIVITY

- Active artisanal mining for tantalite and cassiterite.
- Confirms mineralisation at surface.
- Provides valuable local knowledge and target indicators.
- Supports early-stage bulk sampling and pilot processing.

Tantalite (tantalum)

Cassiterite (tin)

Pilot processing concept (illustrative)

DEVELOPMENT PATHWAY

1. **Complete detailed geological mapping and sampling**
2. **Geophysical surveys to refine targets**
3. **Drilling programme to test key targets**
4. **Preliminary mineral inventory and scoping study**
5. **Pilot processing and metallurgical test work**
6. **Development study and financing options**

PARTNERSHIP OPPORTUNITY

Alpha offers exposure to tantalum, tin and potential rare earth elements, with a pathway to pilot processing and scale-up. We welcome strategic partners and funding institutions.
